## Project Description

These two new residences on the University of Calgary campus were built using the Design-Build method. Aurora Hall is constructed in a triangular and pinwheel configuration. This nine story structure provides the campus with 268 beds. Crowsnest Hall features two towers, one 7 stories and the other 11 stories joined by a common main floor. This structure offers an additional 390 beds to student housing on campus. Both buildings feature shared lounges, social and study spaces.
