**LM Architectural Group**

Structural:  
**Crosier Kilgour & Partners Ltd.**

Contractor:  
**EllisDon**

Construction Value:  
**\$111,000,000**

## Project Description

New 184,870 ft<sup>2</sup> regional health centre in Selkirk replaces the existing 53-bed Selkirk and District General Hospital. Features a new out-patient centre, family birth unit, and improved facilities for dialysis and chemotherapy. Doubles the size of the existing hospital and will have a total of 65 beds. The health centre was built to meet and exceed LEED Silver standards and will be 33% more efficient than the Model National Energy Code minimum standards. The new Selkirk Regional Health Centre has been designed to better accommodate the needs of residents in Interlake-Eastern RHA who require hospitalization or more specialized acute care and out-patient services. With over 17,000 square feet of windows, the new Selkirk Regional Health Centre embraces a more holistic approach to patient care and staff well-being by incorporating an abundance of natural light into the facility.  
 LEED Gold Certified.

## Electrical Systems Description:

The electrical systems designed by MCW incorporate a design philosophy that converged all data and communication technologies onto one common network. This approach was a first for any health care facility in Manitoba.

The emergency and essential power systems were based on allowing 100% back-up with load shedding and load monitoring so that the facility can operate in a long term post disaster mode.
